

Hallucination Hunter

LLM Fact Verification Platform — All Round 2 Features

Round 1 — Already Completed

- Core Text Analyzer — Paste AI text !' extract claims !' verify !' color-coded results
- Voice Input — Speak text with mic !' Speech-to-text !' auto analyze

Round 2 — New Features

FEATURE 01 Supabase Database

Every analysis saved to real cloud database. Data never lost on refresh.

- !' PostgreSQL cloud storage via Supabase
- !' Tables: analyses, claims, sources
- !' Row Level Security for data safety
- !' Real-time sync — data persists forever

FEATURE 02 Analysis History

Timeline of all past analyses. Click any to expand full claim breakdown.

- !' Shows: trust score, claims, timestamp
- !' Click to expand full details
- !' Delete individual entries or clear all
- !' Real-time sync with database

FEATURE 03 Dashboard Analytics

Live stats: Total Analyses, Average Trust Score, Claims Checked.

- !' Total analyses count
- !' Average trust score across all sessions
- !' Total claims checked so far
- !' Auto-updates after every analysis

FEATURE 04 Exact Source Links

Shows the EXACT URL Groq used — real Wikipedia/ NASA pages, not Google.

- !' Clickable source link on each claim card
- !' e.g. wikipedia.org/wiki/Human_skeleton
- !' Sources Tab shows full directory
- !' Only Google fallback if Groq gives null

FEATURE 05 Claim Classification

3-tier system with confidence % and category tag per claim.

- !' ' Verified — supported by sources
- !' & p Unverifiable — no source found
- !' 'L Incorrect — contradicted by source
- !' Confidence % + category tag (Science etc)

FEATURE 06 Export & Share

Export as PDF, copy to clipboard, or share via link with judges/team.

- !' Export full report as PDF
- !' Copy results to clipboard
- !' Share analysis via link
- !' Trust score + all claims included

+P Key Feature: Exact Claim Sources (Most Important for Judges)

When Groq verifies a claim, it returns the exact source page. We show that exact URL:

"Human body has 206 bones" !' wikipedia.org/wiki/Human_skeleton
"Mars is 4th planet" !' wikipedia.org/wiki/Mars
"Sun is 93M miles away" !' solarsystem.nasa.gov/solar-system/our-sun/
